Batch: Group Friend Finder

Within the Assignment I uploaded the app's APK named "app-debug.apk".

If APK did now load properly then you may download the APK from

https://github.com/spartaneman/Batch_Final.git

The App can be run using and android emulator.

Step 1: Go to https://www.bluestacks.com/ and download and install the bluestack 10 application. The emulator itself will have advertisement, however it won't impede running the app.
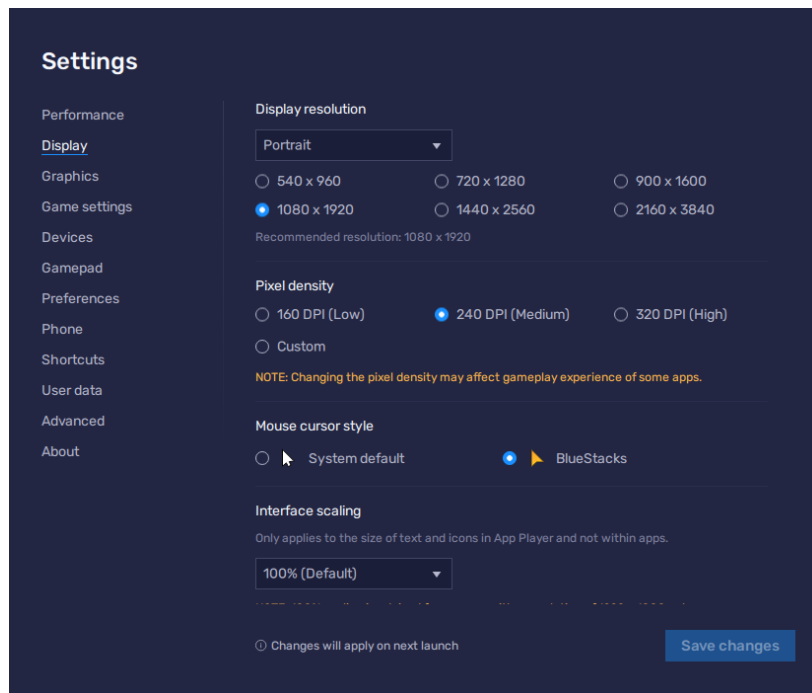

Step 2: Once installed you select the app player which is the stack symbol pointed in the image.

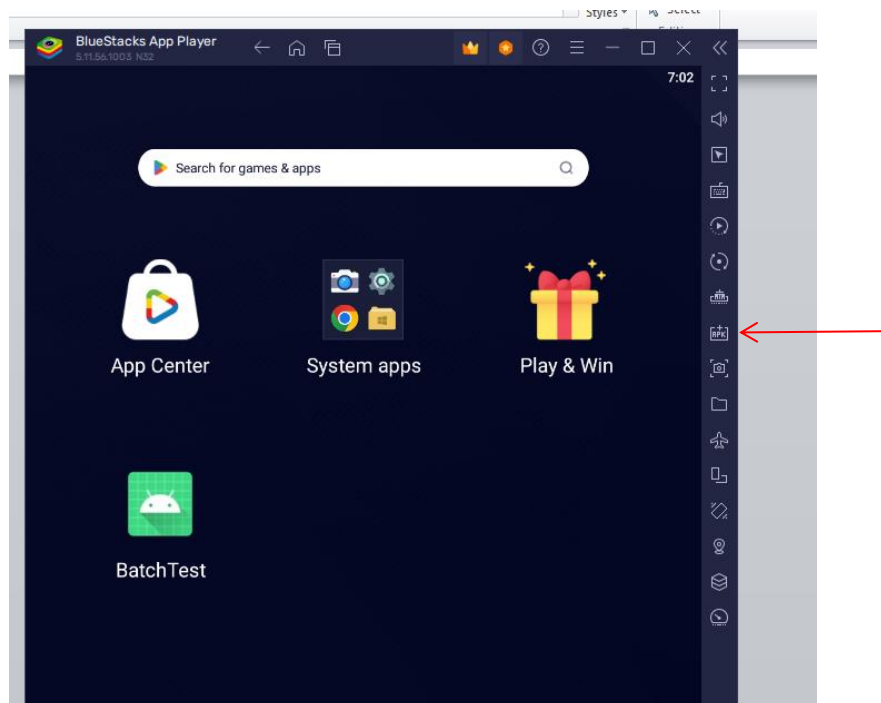

Step 3: The Emulator automatically starts in landscape. In the settings under display you can change the view to portrait.

And save changes.

Step 4: Upload the APK to the emulator by selecting the apk option on the right panel of the emulator as pointed to. The App will be called BatchTest

Step 5: Selecting the app will bring you to the login page where you can create a new account. However, if you wish to skip that aspect you can use the following account details to see the apps functionalities.
